149	Azret	Kenzhaliev	Kyrgyzstan	243	Bronze
149	Gonçalo	Paredes	Portugal	243	Bronze
154	Richard	Hladik	Czech Republic	240	Bronze

Rector of KFU passes IOI flag to Iran

On 18 August, the closing ceremony of the XVIII International Olympiad in Informatics (IOI 2016) took place.

Many prestigious universities from around the world are ready to open their doors to winners at the Olympiad without the need for exams, and the largest enterprises in the IT industry would gladly welcome them into their ranks.

President of the IOI **Krassimir Manev** was very pleased with IOI 2016:

"I feel that this year everything has gone right. The Russian team is one of the most experienced: it has been in the IOI from the very beginning, and consistently holds informatics competitions at regional, national and international level. Its experience at scientific, technical and organisational level is vast. I can say that of the whole history of the IOI, this year has been one of the best. Most of all I like how everything here is in one place – it's very inconvenient when

the accommodation is a long way from the where the competition is held. That has happened before. In addition, Kazan has had an unseasonably warm August. It's important to remember that the children are the most important part of these events – competitions are very stressful so it's important to create the most comfortable, peaceful surroundings for them we can."

The most significant moment of the closing ceremony was the handing over of the flag of the International Olympiad in Informatics. The holders of this year's Olympiad passed the flag to representatives from Iran, for IOI 2017 will take place next year in Tehran.

"This is my first time in Kazan, but I can say with absolute certainty that it is a lovely city," said **Hossein Shojaei**, Deputy Minister of Education of the Islamic Republic of Iran, after receiving the flag.

Passing the baton

Mohammad Ali Abam, International Committee member and Chair of IOI 2017 in Iran (photo: right)

Next year the International Olympiad in Informatics will be held in Tehran. We've actually launched the website today, and have already chosen a logo. At the IOI 2016 closing ceremony we will show a short video clip about the country and the city where next Olympiad will take place. The IOI has been held at a very high level in Russia, and now our task is to hold the Olympiad in our country at the same standard.

Seiichi Tani, International Committee member and Chair of IOI 2018 in Japan (photo: left)

This Olympiad has gone wonderfully – participants, team leaders and guests all liked the accommodation, excursions, cultural programme, and the organisation in general. I have been impressed by the Russian volunteers – they were very friendly and hard-working. I want to find out the secret to assembling such a good crew! As for IOI 2018 in Japan, we have already found the contest hall and meeting rooms, and will soon decide on accommodation. We are also thinking about the cultural programme. It's an interesting experience for us – it was very useful for our students to meet with the finest young minds in IT, share experience, and get to know a different country.

Fuad Hajiyeu, International Committee member and Chair of IOI 2019 in Azerbaijan (photo: middle)

In three years' time, in 2019, the Olympiad will be held in Baku. Azerbaijan has no real experience of holding such major international events, so while here I have tried to learn as much as possible about the various aspects of holding an Olympiad, and have spoken much with the organisers. In my opinion, the Universiade Village was a very good choice – it's a wonderful place. Everyone – Olympiad participants, organisers and team leaders – all stayed here together, meaning everyone had a chance to socialise with each other, and that's very important. Bravo, Russia, bravo, Tatarstan – you've done everything! A triumph!

Welcome to Kazan Federal University

Dear contestants!

Choosing a profession, and the institution at which you will study, is one of the most important steps in life. Kazan Federal University's doors are open before you, offering a bright and varied palette of subjects and specialisations in IT tuition.

Three of KFU's institutes offer courses in IT: the **Higher School on Information Technologies and Information Systems (ITIS)**, the **Institute of Computational Mathematics and Information Technologies**, and the **Lobachevski Institute of Mathematics and Mechanics**.

An important part of studying at KFU is the industry-oriented focus of its research and tuition. From their second year, students take up placements in IT companies where they participate in research and development. Many courses offer the possibility to obtain a dual diploma.

Our university is open not just to Russians but to students from all over the world. In this regard, all winners and medalists at the International Olympiad in Informatics are eligible

for an unconditional offer from KFU in IT-specific courses – this is written into law. I would like to mention that the Ministry of Education and Science of the Russian Federation have updated their policy – for members of the Russian team this privilege is valid not just for one year, as before, but four.

If you are hoping for a good career, material success and respect in society, make KFU your choice!
